Pokemon Theta Emerald EX is an enhanced version of the original Pokemon Emerald game. It offers several new features, including 721 Pokémon, 600+ moves, and proper physical/special split, fairy-type Pokémon, and updated battle systems. The game also includes new items, abilities, and a Mega evolution system. A notable feature is the availability of the dual-type fire/water mythical Volcanion, which can be surprisingly obtained. Pokemon Theta Emerald The Last Dance is a Game Boy Advance rom hack of Pokemon Emerald, offering a fresh experience with new features and additions from later generations. #### Key Features: * Almost 900+ Pokemon from Generations 1 to 6 are available * Physical/Special split for Pokémon moves * Fairy typing on intended Pokemon * Reusable TMs * Modern repel system * Deletable HMs #### Gameplay and Additions: The game includes a Wonder Trade feature, where players can exchange items with others. The Shiny rate is around 1 in 257, which some may consider better than the original. #### New Elements: * A new Nuzlocke mode adds an extra layer of challenge * NPCs like Rater, Move Tutor, and Move Deleter are present in Pokemon Centers #### Credits and Support: The game is credited to Chaos Rush, MrDollSteak, and thedarkdragon11. The developer, LCCoolJ95, has fully released the hack in 2016 and is actively supported by the Discord community. This version of Pokemon Theta Emerald EX offers an exciting experience for seasoned players seeking a new challenge. This hack truly shines in its implementation of Mega Evolution. Every Pokémon that can Mega Evolve in Gen 6 is also available here. I was pleasantly surprised by how seamlessly this feature integrates into the game, feeling like it's been there all along. The items pocket in the bag now holds over 200 items, eliminating the need to frequently remove some to make room. However, despite its quality, the game does have its fair share of glitches. As a fan-made game, some bugs are unavoidable. Notable issues include: * A new Pokémon replacing one of the original 386 appearing on the Hall of Fame screen after beating the game * Some Pokémon displaying different colored icons when leveling up outside of battle * New Pokémon showing different colored icons when selecting multiple in a box * Losing TMs or HMs near the Battle Tent * The game freezing during specific actions: + Entering a Pokémon Contest + Touching the blackboard inside the Trainer School + Teaching Hydro Pump to a Pokémon + Double battling trainers in Mauville City You can download this Game Boy Advance rom hack from the provided MediaFire link. The compressed file contains the game patch and a patcher application. To aid navigation, there are resources available: * A Google Sheet with all wild Pokémon locations, levels, and encounter rates * Videos for finding Mega Stones, Arceus Plates, TM locations, and creation trio orb locations Here's a rewritten version of the text: Legendary Pokémon locations are scattered throughout regions.
